# 1. Introduction

1.1 Context

1.2 Motivation

1.3 Research questions

- Reducing emissions from deforestation and forest degradation (REDD+)

UN-REDD  
PROGRAMME

- REDD+ MRV

Measurement  
Reporting  
Verification

- Forest Degradation Monitoring with Satellite Data (FORMOSA)

- Carbon stock changes can be quantified accurately only if forest cover is mapped with high accuracy.
- How does the accuracy of forest cover maps vary in relation to the spatial and spectral resolution of satellite imagery and possible Minimum Mapping Units (MMUs) utilized for mapping forest?
- Quantifying the accuracy of forest cover maps can help REDD+ countries decide on the satellite imagery spatial resolution and MMU to be used for monitoring deforestation and forest degradation.

- How do different high- and medium-resolution satellite sensors affect the accuracy of forest cover mapping?
- How does the size of MMUs affect the accuracy of forest cover mapping?

# 2. Theoretical Background

---

2.1 Forest mapping with remote sensing data

2.2 Minimum mapping unit in forest cover mapping

2.3 Accuracy assessment of remotely sensed data

## 2.1 Forest mapping with remote sensing data

High-resolution satellite  
imagery  
Magdon et. al.

Hierarchical classification  
scheme

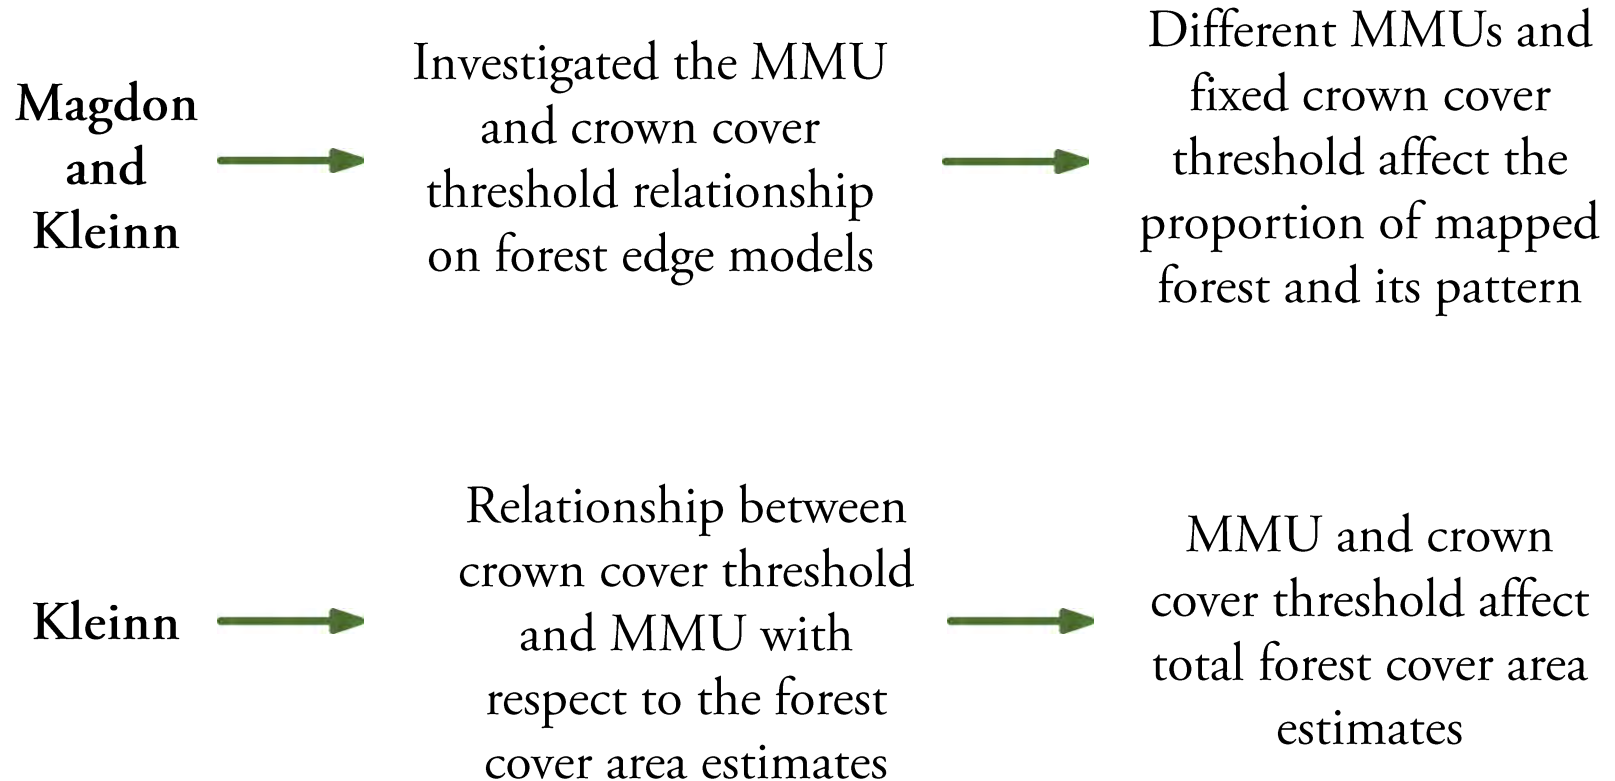

Medium-resolution satellite  
imagery  
Asner et. al.

Subpixel  
decomposition  
method

## 2.2 Minimum Mapping Unit (MMU)

## 2.3 Accuracy Assessment

**Thematic accuracy assessment:**  
measures the agreement between the feature labels on the map and the feature labels from the reference data.

**Components of rigorous accuracy assessment:**

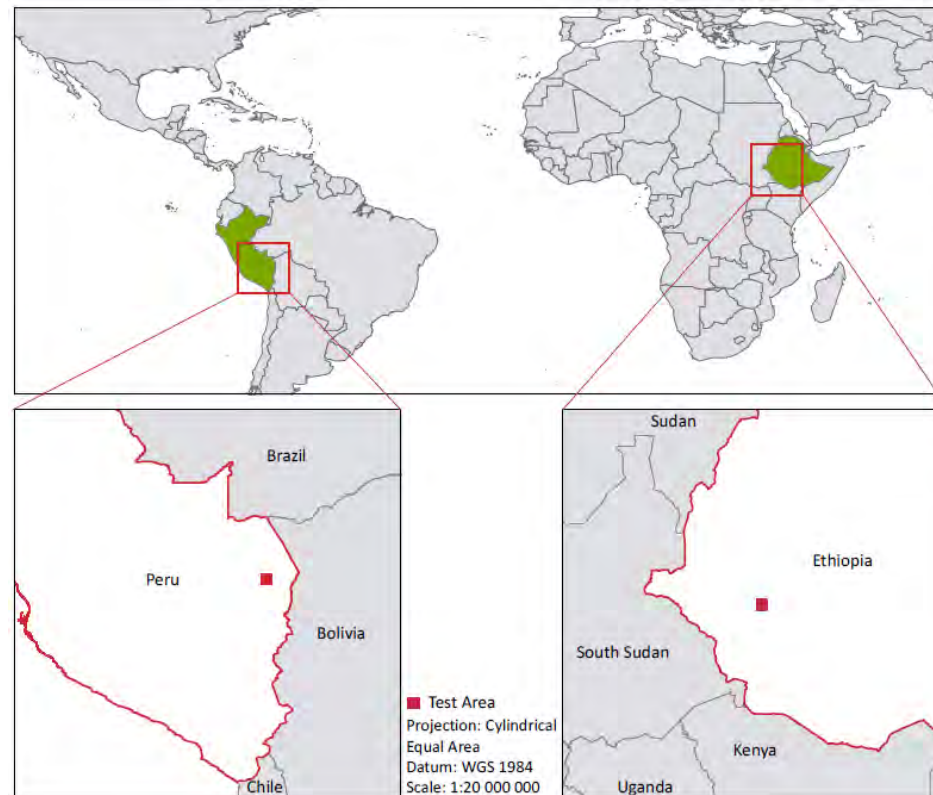

- The sampling design
- The response design
- The analysis

**Error/Confusion Matrix:**

		Reference			
		1	2	...	q
Map	1	$p_{11}$	$p_{12}$	$\cdots$	$p_{1q}$
	2	$p_{21}$	$p_{22}$	$\cdots$	$p_{2q}$
	$\vdots$	$\vdots$	$\vdots$	$\cdots$	$\vdots$
	q	$p_{q1}$	$p_{q2}$	$\cdots$	$p_{qq}$
		$p_{+1}$	$p_{+2}$	$\cdots$	$p_{+q}$

Figure 2: Error matrix for q classes

### 3. Test areas and data

Satellite	Spatial resolution	Number of spectral bands	Processing level
RapidEye	5 m	5	3A
Landsat-8	30 m	11	1T
Sentinel-2	10 m	13	1C

Table 1: Satellite specifications

- 4.1 Image pre-processing and Forest cover mapping for REDD+ MRV
- 4.2 Forest cover mapping from high-resolution satellite imagery
- 4.3 Forest cover mapping from medium-resolution satellite imagery
- 4.4 Accuracy test of forest maps derived from high- and medium-resolution imagery
- 4.5 Minimum mapping unit forest map accuracy test

# 4.1 Image pre-processing and Forest cover mapping for REDD+

## Image pre-processing:

- Co-registration

Automatically and manually

- Atmospheric Corrections

ATCOR IDL 8.4

- Haze reduction

ATCRO PCI Geomatics

- Clipping

PCI Geomatics

## Forest definition:

- Minimum forest area (MMU)
- Minimum tree crown cover threshold

## Ethiopia:

- 20% tree crown cover
- 0.5 ha MMU
- 2 m minimum height

## Peru:

- 10% tree crown cover
- 0.09 ha MMU
- 5 m minimum height

## 4.2 Forest cover mapping from high-resolution satellite imagery

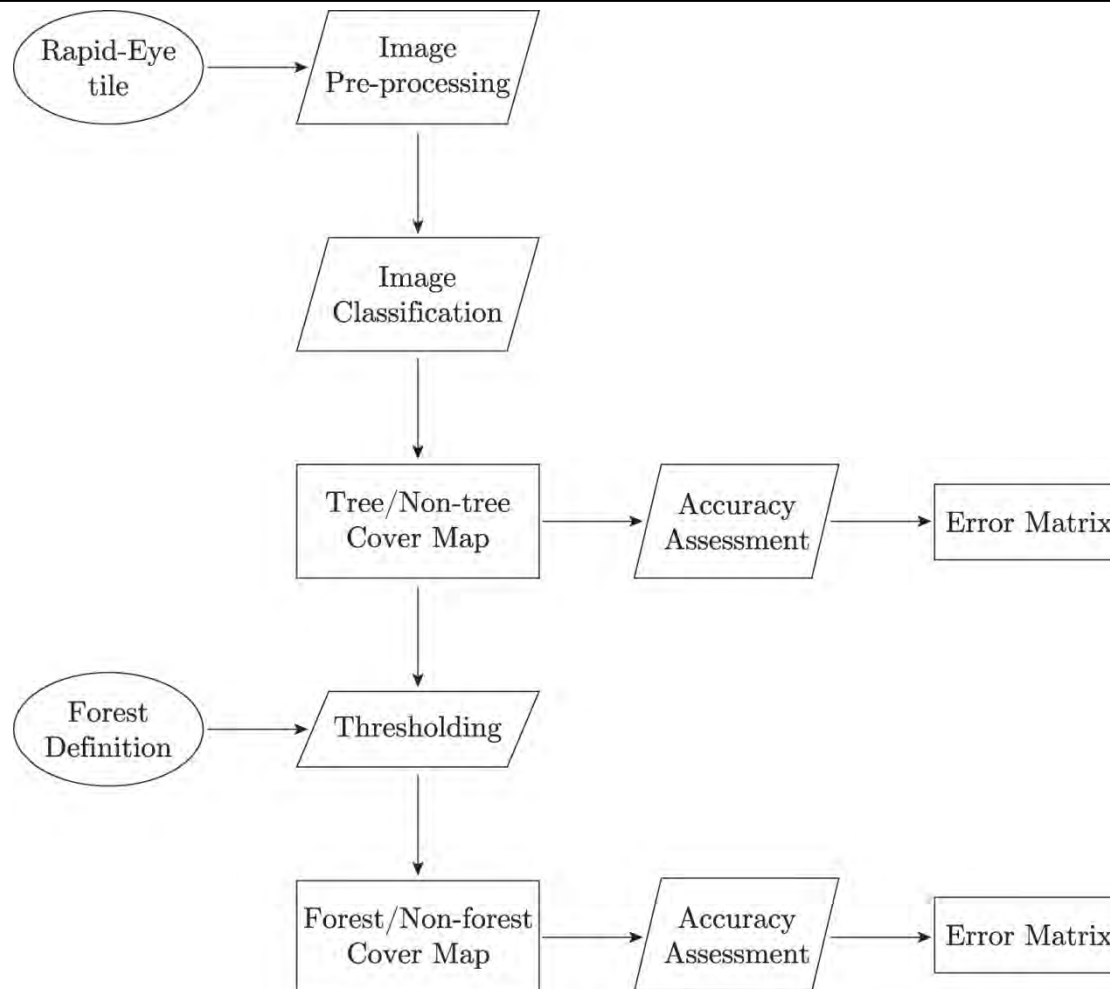

Figure 2: Forest cover mapping workflow for high-resolution imagery

## 4.3 Forest cover mapping from medium-resolution satellite imagery

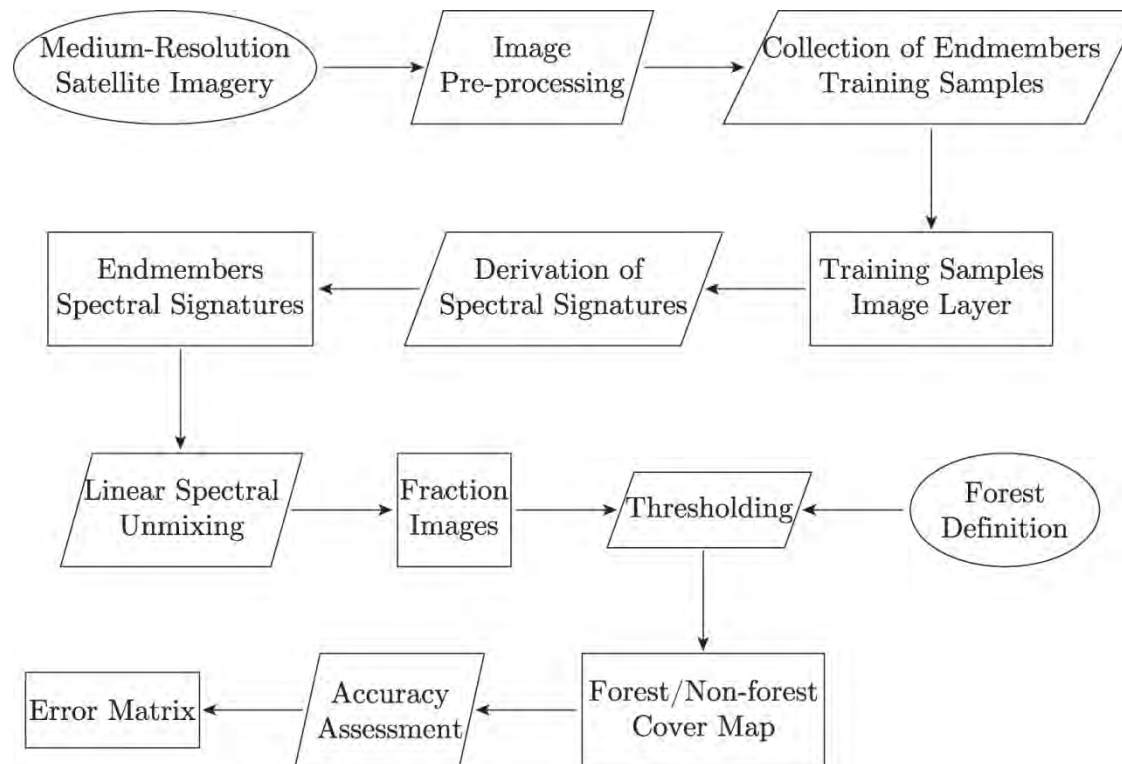

Figure 3: Forest cover mapping workflow for medium-resolution imagery

## 4.4 Accuracy test of forest maps derived from high- and medium-resolution imagery

- Quantified the effect of image resolution on the accuracy of forest cover maps
- Simple random sampling approach
- 302 sample points
- Dot-grid sampling technique

Test area	Satellite	Forest cover map MMU	Forest cover mapping method
Ethiopia & Peru	RapidEye	15 m x 15 m	4.2.1
Ethiopia & Peru	Landsat-8	30 m x 30 m	4.2.2
Ethiopia & Peru	Sentinel-2	10 m x 10 m	4.2.2

Table 2: List of forest cover maps that were assessed for accuracy

Test area	Satellite	Reference datasource	Spatial assessment unit	MMU	Reference classification scheme
Ethiopia & Peru	RapidEye	Google Earth	15 m	15 m	Forest; Non-forest
Ethiopia & Peru	Landsat-8	Google Earth	30 m	30 m	Forest; Non-forest
Ethiopia & Peru	Sentinel-2	Google Earth	10 m	10 m	Forest; Non-forest

Table 3: Components of response design protocol

## 4.5 Minimum mapping unit forest map accuracy test

- Quantified the effect MMU on the accuracy of forest cover maps
- Simple random sampling approach
- 1449 sample points
- Reference data: tree cover map
- Point sample unit

Test area	Satellite	Forest cover map MMU [m]	Forest cover map MMU [pixels]
Ethiopia & Peru	RapidEye	15 x 15	3 x 3
		30 x 30	6 x 6
		50 x 50	10 x 10
		70 x 70	14 x 14
		100 x 100	20 x 20
		150 x 150	30 x 30
		200 x 200	40 x 40
		250 x 250	50 x 50
		300 x 300	60 x 60

## 5.2 Minimum mapping unit forest map accuracy test

Average forest cover maps overall accuracies with corresponding confidence intervals with respect to MMU for Peru and Ethiopia.

- This thesis provides accuracy measure for mapping forest from high- and medium-resolution satellite imagery and at different MMUs.
- Accurate forest maps generated from high-resolution satellite imagery.
- Considerable, non-stable loss of accuracy for medium-resolution satellite imagery.
- Accuracy assessment confirmed the decrease of forest cover mapping accuracy when comparing high- and medium-resolution satellite data.
- Accuracy of forest cover maps decreases with increasing the size of MMU.

- Ground visits as reference data.
- Test effect of landscape properties and crown cover threshold.
- REDD+ countries can decide which satellite imagery spatial resolution and MMU to use for forest cover mapping.
