

Cartography M.Sc.

Master thesis

Multi Criteria Decision Analysis and Automatic Submarine Cable Routing

Daphné Tapia

2020

Multi Criteria Decision Analysis and Automatic Submarine Cable Routing

Submitted for the academic degree of Master of Science (M.Sc.)

Thesis submitted to the Faculty of Geo-informatics and to the Institute of Cartography of the Technical University of Dresden in partial fulfilment of the requirements for the joint Master of Science in Cartography.

Author: Daphné Tapia

Study course: Cartography M.Sc.

Supervisor: Dr.-Ing. Stephan Mäs (TUD), Chair of Geoinformatics

Reviewer: Drs. Richard Knippers (UT), Department of Geo-information Processing and Faculty of Geo-information Science and Earth Observation

Cooperation: Alcatel Submarine Networks

Date of submission: 10.09.2020

Multi Criteria Decision Analysis and Automatic Submarine Cable Routing

Alcatel Submarine Networks, Nozay, France

ASN supervisor: Michele Barezzani

Statement of Authorship

Herewith I declare that I am the sole author of the submitted Master's thesis entitled:

“Multi Criteria Decision Analysis and Automatic Submarine Cable Routing”

I have fully referenced the ideas and work of others, whether published or unpublished. Literal or analogous citations are clearly marked as such.

Paris, 10.09.2020

Acknowledgment

This thesis could not be possible without the participation and assistance from many people. First, I would like to express my sincere gratitude to my first supervisor Dr.-Ing. Stephan Mäs for the guidance through each discussion. Your comments and insights were always a great help. I would like to thank Prof. Dipl.-Phys. Dr.-Ing. habil. Dirk Burghardt and Drs. Richard Knippers for the insightful feedback during the research proposal and the midterm presentation. Thanks to Mr Mathias Gröbe for his availability and great help. Thanks also to Dr.Eva Hauthal and Mrs. Juliane Cron for their involvement throughout the program.

I would like to thank the Marine Business Development team from Alcatel Submarine Networks for being so gentle and welcoming. Thank you for teaching me and sharing with me your knowledge about the submarine cable industry and for turning this internship into such a meaningful experience. It was a true honor and pleasure to work with you, Michele Barezzani, François-Xavier Abrial and Alban Crusson.

I am grateful to my classmates from whom I have learned a lot. The two years of the master's program are a unique and unforgettable experience. Finally, I would like to thank my family for their unconditional love and support, my friends for being so faithful, and Michael, for whom no more words are needed because he knows how I feel towards him.

Abstract

Submarine cable routing is a critical phase in the definition of a new submarine cable system: this complex activity is traditionally performed manually. The aim of this master's thesis is to define methods and algorithms to automatically generate submarine cable paths on the sea bottom. The objective is to determine optimal routes in a time and cost-efficient manner. Tests were run on different geographic zones using the Least Cost Path Algorithm, while trying different cost functions.

Keywords: Multi Criteria Decision Analysis, Single Criteria, Least Cost Path, Automatic Submarine Cable Routing.

Acronyms

AC	Alter Course
ASN	Alcatel Submarine Networks
BMH	Beach ManHole
BU	Branching Unit
CRE	Cable Route Estimate
CSV	Comma-Separated Value
CZ	Contiguous Zones
DA	Double Armour
